

CareConnect

Feature Testing Checklist — v1.0

Project	CareConnect — Comprehensive Healthcare Platform
Purpose	Verify all features work correctly before production
Sections	13 test sections covering all roles and features
Roles	Patient · Doctor · Admin
Stack	Next.js 14 · Supabase · Ollama / Claude API

HOW TO USE		
☐	Checkbox	Empty box = not tested yet
☐	Pass	Tick the box when feature works correctly
☐	Fail	Write the error next to the box if it fails

1 Authentication

- ☐ Register as a new patient at /register/patient — fill name, email, phone, password
- ☐ Check email inbox and click confirmation link
- ☐ Login with patient credentials → must redirect to /patient/dashboard
- ☐ Register as a new doctor at /register/doctor — fill all professional fields
- ☐ Login as unverified doctor → must see Pending Verification screen (not dashboard)
- ☐ Click Sign Out → must redirect to /login
- ☐ While logged out, manually visit /patient/dashboard → must redirect to /login
- ☐ While logged out, manually visit /doctor/dashboard → must redirect to /login
- ☐ Register with an already-used email → error message must appear

2 Admin Panel

Run this SQL in Supabase to make yourself admin before testing this section:

```
update profiles set role = 'admin' where email = 'your@email.com';
```

- ☐ Login with admin account → redirects to /admin/dashboard
- ☐ Dashboard shows correct counts: patients, doctors, pending verifications, appointments
- ☐ Go to /admin/verifications → pending doctor registration is visible
- ☐ Click Approve on the pending doctor → doctor status changes to verified
- ☐ Verify approved doctor can now login and access doctor portal
- ☐ Go to /admin/users → all registered patients and doctors are listed
- ☐ Search for a user by name → correct results shown
- ☐ Filter users by role (patient / doctor) → correct users shown
- ☐ Click Deactivate on a user → status changes to Inactive
- ☐ Click Reactivate → status changes back to Active

3 Patient Dashboard

- ☐ Login as patient → /patient/dashboard loads without errors
- ☐ Greeting is correct based on time of day (Good morning / afternoon / evening)
- ☐ Patient first name shown correctly in greeting
- ☐ Stat badges show correct numbers (0 when no data)

- ☐ All 4 Quick Action buttons are visible and clickable
- ☐ Book Appointment button → navigates to /patient/doctors
- ☐ AI Consultation button → navigates to /patient/ai-consultant
- ☐ Medical Records button → navigates to /patient/records
- ☐ Messages button → navigates to /patient/messages
- ☐ Upcoming Appointments section shows empty state with Book CTA when no appointments
- ☐ Latest AI Report section shows empty state with Start CTA when no sessions
- ☐ Recent Notifications section shows empty state when no notifications

4 Doctor Discovery

You need at least one verified doctor in the system to test this section.

- ☐ Go to /patient/doctors → page loads, verified doctors listed
- ☐ Unverified doctors do NOT appear in the list
- ☐ Each doctor card shows: name, specialty, experience, fee, location, rating
- ☐ Search by doctor name → results filter in real time
- ☐ Filter by specialty from dropdown → correct doctors shown
- ☐ Filter by location text → correct doctors shown
- ☐ Clear filters → all doctors shown again
- ☐ Click View Profile → navigates to /doctors/[id]
- ☐ Doctor profile page shows: name, specialty, bio, experience, fee, license, location
- ☐ Reviews section shows on profile (empty or with reviews)
- ☐ Book Appointment button on profile → navigates to /patient/appointments?doctor=[id]

5 Appointment Booking & Management

- ☐ Go to /patient/appointments → page loads correctly
- ☐ Click + Book Appointment → booking modal opens
- ☐ Doctor dropdown loads all verified doctors
- ☐ Select a doctor, future date, and time → click Confirm Booking
- ☐ Success message appears and modal closes
- ☐ New appointment visible in Upcoming tab with status: pending
- ☐ When coming from doctor profile (Book Now), doctor is pre-selected in modal
- ☐ Try booking same doctor at same time → conflict error message shown
- ☐ Filter tabs work: Upcoming / Past / Cancelled / All
- ☐ Click Cancel on a pending appointment → confirmation dialog appears
- ☐ After confirming cancel → appointment moves to Cancelled tab
- ☐ Past appointments (completed or past date) appear in Past tab

6 AI Consultant — MediPrep

Make sure Ollama is running: ollama serve — and your model is loaded: ollama list

- ☐ Go to /patient/ai-consultant → page loads
- ☐ If upcoming appointments exist, appointment selector dropdown is visible
- ☐ Select an appointment from dropdown to link session
- ☐ Click Begin Check-in → AI sends first message asking for name and age
- ☐ Answer all questions — AI asks exactly one question per message
- ☐ AI correctly follows OLDCARTS framework (onset, location, duration, etc.)
- ☐ Type emergency symptoms (chest pain + sweating + arm pain) → emergency warning shown
- ☐ After ~15 questions, AI generates report with ===REPORT_START=== markers
- ☐ Report modal opens automatically after 1.2 seconds
- ☐ Report contains all sections: Chief Complaint, HPI, Differentials, Red Flags
- ☐ Click Download PDF → PDF file downloads to computer
- ☐ Success message shows: PDF saved to your account and downloaded
- ☐ New session button resets chat for a new consultation

7 Medical Records

Complete Section 6 first — the AI report must be downloaded before it appears here.

- ☐ Go to /patient/records → page loads
- ☐ After completing AI consultation and downloading PDF, record appears in list
- ☐ Record shows type: AI Report with correct date
- ☐ Filter by ai_report → only AI reports shown
- ☐ Filter by prescription → only prescriptions shown (if any)
- ☐ Filter by all → all record types shown
- ☐ Click Download on a record → opens or downloads the PDF
- ☐ Records uploaded by doctors also appear here (test after doctor section)

8 Messages

- ☐ Go to /patient/messages → page loads
- ☐ Empty state shown when no conversations exist
- ☐ Conversations list shows doctor name and specialty
- ☐ Click a conversation → messages load in chat area
- ☐ Type a message and press Enter → message appears in chat
- ☐ Click Send button → message appears in chat
- ☐ Messages show correct timestamp
- ☐ My messages appear on the right (blue), doctor messages on the left

9 Patient Profile

- ☐ Go to /patient/profile → page loads with current user info
- ☐ Full name and email displayed correctly
- ☐ Edit full name → save → name updates in profile and sidebar
- ☐ Edit phone number → save → updates correctly
- ☐ Required field validation works (name cannot be empty)

10 Doctor Portal

Login as the doctor you approved in Section 2.

- ☐ Login as verified doctor → redirects to /doctor/dashboard
- ☐ Dashboard shows: today's appointments count, total patients, total appointments, rating
- ☐ Today's schedule section shows appointments for today
- ☐ Go to /doctor/appointments → all appointments listed
- ☐ Filter by status works: Pending / Confirmed / Completed / Cancelled
- ☐ Click Confirm on a pending appointment → status changes to Confirmed
- ☐ Click Complete on a confirmed appointment → status changes to Completed
- ☐ Add notes to a completed appointment → notes saved and visible
- ☐ Go to /doctor/patients → all patients who booked are listed
- ☐ Click a patient → their medical history, conditions, AI reports visible
- ☐ Patient's AI report (from Section 6) linked to appointment is visible
- ☐ Go to /doctor/schedule → working hours UI loads
- ☐ Set working days and time slots → saves correctly
- ☐ Go to /doctor/profile → professional info displayed
- ☐ Edit bio, fee, location → save → updates correctly

11 Notifications

- ☐ Book appointment as patient → notification created for doctor
- ☐ Login as doctor → notification visible in dashboard
- ☐ Notification shows correct title and body text
- ☐ Notification badge count shows correct unread number

12 End-to-End Flow — Most Important Test

This tests the complete patient journey from registration to appointment completion. Run this after all individual sections pass.

Step 1	☐	Register as a new patient
Step 2	☐	Login and land on patient dashboard
Step 3	☐	Go to Find Doctors, search by specialty
Step 4	☐	Click View Profile on a doctor
Step 5	☐	Click Book Now from doctor profile
Step 6	☐	Booking modal opens with doctor pre-selected — select date/time and confirm
Step 7	☐	Go to AI Consultant — select the appointment just booked
Step 8	☐	Complete full AI conversation — all 15 questions
Step 9	☐	Report modal opens — click Download PDF
Step 10	☐	Go to Medical Records — AI report appears with download link
Step 11	☐	Login as admin — approve the doctor if not already done
Step 12	☐	Login as doctor — see the appointment in dashboard and appointments page
Step 13	☐	Doctor confirms the appointment
Step 14	☐	Doctor opens patient profile — AI pre-consultation report is visible
Step 15	☐	Doctor marks appointment as completed and adds notes
Step 16	☐	Login back as patient — appointment shows as completed in past tab

13 Edge Cases & Security

- ☐ Register with duplicate email → error message shown, no duplicate account created
- ☐ Login with wrong password → error message shown, no access granted
- ☐ Book appointment in the past → system rejects or prevents selection
- ☐ Try /doctor/dashboard as patient → redirected to /login
- ☐ Try /admin/dashboard as doctor → redirected to /login
- ☐ Try /patient/dashboard as doctor → redirected to /login
- ☐ Reload page after login → stays on correct page, NOT redirected to login
- ☐ Open app in incognito window → goes to /login correctly
- ☐ Refresh patient dashboard → data reloads correctly without errors
- ☐ Type emergency symptoms in AI chat → emergency warning message displayed
- ☐ Submit empty booking form → validation error shown
- ☐ Very long message in chat → displays correctly without overflow

! Known Limitations — Not Yet Implemented

Feature	Status	Planned
Email appointment reminders	Not implemented	Phase 2
SMS reminders via Twilio	Not implemented	Phase 2
Real-time live messaging	Basic only	Phase 2
Google Maps doctor locations	Not integrated	Phase 2
Patient review submission UI	Profile view only	Phase 2
Doctor messaging inbox	Patient-side only	Phase 3
Video call integration	Not implemented	Phase 3
PDF export from doctor side	Patient only	Phase 3
Push notifications	In-app only	Phase 3
